	Urgent	**Not Urgent**
Important	**Do - (Your MVP)** ● Use Purdue API to get menu items ● User interaction(specifically allowing users to input allergies, preferences, etc) ● Filter items, creating an algorithm to make accurate suggestions	**Schedule - (For V2.0+)** ● Save user inputs, maybe account/password system ● Account for distance/proximity ● Show nutrional values of each item, account for hitting specific targets (like getting enough protein, vitamins, minerals, fiber, etc)
Not Important	**Delegate - (Use a library)** ● Java's HTTPClient ● Use Jackson to iterate through the JSON API Dining Hall File ● Maven to automate compiling	**Delete - (Cut it)** ● AI Chatbot/Assistant to talk to student and get input ● Implementing a student-ran message board that allows students to post fun facts/information/memes about the dining hall's food ● Adding restaurant/retail stores as options
